Herman:

For tables 1 and 4, I believe that the annual PM10 total impacts should be 5.3 as you suggest and the annual SO2 impacts should be 7.8 (i.e. 3.8 at hull + 1.4 at 1000m + 2.6 background).

Rodger,

Table 1 and Table 4 appears to have incorrect total impact calculations. Specifically, the total of the annual PM10 and annual SO2 do not match the sum of the individual contributions.

My calculations totals are 5.3 for PM10 and 7.4 for SO2.

Please clarify.
